MV3000 Remanufactured Switch
Mode Power Supplies (SMPS) for
GE/Converteam Delta Modules

Authorized Licensed Manufacturer of GE/Converteam MV3000 Product Line

Avid Controls provides remanufactured **MV3000 Switch Mode Power Supplies (SMPS)**. Avid's remanufacturing process follows **Closed Loop Recycling** guidelines to help reduce overall carbon footprint and cost while maintaining strict reliability requirements.

Extensive experience manufacturing new and remanufactured MV3000 products allows Avid to provide remanufactured SMPS that meets or exceeds the **reliability of new**. An Avid remanufactured SMPS is NOT a repair since a typical repair does not meet the **rigorous quality standards**. When remanufacturing the SMPS is completely disassembled, cleaned, subcomponents tested and essential parts replaced before final assembly and unit testing.

- > All components with a life expectancy of 20 years or less are replaced with original OEM new components (electrolytic and tantalum capacitors, small special transformers, etc.). This allows us to maintain all **certifications as new OEM built SMPS**.
- > All steel and Lexan covers replaced with new, meeting the latest **ETL/UL specifications** for fire ratings and all other new UL requirements.
- > Testing and calibration in accordance with original OEM production specifications.
- > 8-hour full load **burn-in test**.
- > Warrantied as **new**.
- > Core trade-in credit offered.
- > Inventory in Canada, USA, Denmark and U.K.
